Decline in area under coarse cereals is observed as a long-term trend because of shift in cropping pattern due to extension of irrigation facilities and also to oilseeds crops under rainfed conditions as these are more remunerative as compared to coarse cereals. There is no declining trend as such in yield of coarse cereals as rate of growth of productivity of coarse cereals during the period 1980-81 to 1994-95 was observed at 2.31 per cent per annum. However, there was some down-ward fluctuations during the years 1993-94 and 1994-95 because of adverse rainfall and weather conditions. The yield per hectare of coarse cereals again showed an upward trend during 1995-96.

(c) The productivity of coarse cereals in India as compared with some of the developing countries during 1994 is as follows:-

Country	*Yield (Kgs./Hectare)*
Afghanistan	1316
Bangladesh	
India	1016
Indonesia	2177
Iraq	841
Iran	1541
Malaysia	1905
Pakistan	977
Phillipines	1722
Sri Lanka	973
Sudan	471
Tanzania	1085
Algeria	702
Nigeria	1055
Guyana	1174

(d) In order to increase the production and productivity, a centrally sponsored scheme on Integrated Cereals Development Programme in Coarse Cereals Based Cropping System Area (ICDP-Coarse Cereals) is being implemented in 830 identified blocks in the States of Gujarat. Kamataka, Madhya Pradesh, Maharashtra and Sikkim.
